

ARMeet: AR Data visualization for meetings.

By:
Juan Sebastian Muñoz Arango

Description

- Mobile app for visualizing data in meeting reports.
- Data visualized on top of the reports
- Data can interact with additional image targets provided.
- Limited interaction with the data, purpose is visualization.

ARMeet: Usage

1. User opens the ARMeet app and points the camera towards the.
2. Center of the screen can point towards parts of the data to get some relevant information from the report.
3. An image target next to the augmented report page, creates comparsion on what's already being visualized
4. User then can compare and make conclusions on his own with the generated data.
5. Finally, the user can at any point move to another page and start the process all over again.

Risks

- Multiple image targets visualized at the same time.
- Amount of image targets.
- Size of the data to visualize.

Questions?

Thanks!
